-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### **DETAILED ACTION**

#### ***Claim Rejections - 35 USC § 112***

Claim 4 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 4, last line, the phrase "the branch directions" has no antecedent basis.

#### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 1-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Maegawa et al (5428545).

Maegawa shows the traffic information calculation device that includes vehicle information acquisition means that acquires vehicle information including a position and

time at the position of a vehicle (GPS receiver 32); a branch determination means that determines from a position of an intersection on a map database and the vehicle information, a branch direction of the vehicle at the intersection; and intersection traffic information calculation means that calculates, from the vehicle information a jam length at the intersection for each of the branch directions, see figures 3 and 4, see col. 4, lines 10-39.

With respect to obviousness, Maegawa suggests, "selecting routes meeting predetermined restrictive conditions from among the possible routes, and selecting a recommendable route from among routes selected meeting the predetermined restrictive condition, col. 1, lines 37-51; calculating means 29 for calculating the length of a congested section, col. 4, lines 20-28; map data storage 34 is analogous to the claimed map database, col. 4, lines 40-68.

The artisan recognizes that display in figures 6 and 7 includes intersections.

With respect to claim 2, see col. 18, lines 29-51.

With respect to claim 3, see traveling speed sensor 38, col. 18, lines 58-68.

Claims 4-6 are clearly illustrated in figures 6 and 7.

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Ohta and Mintz are cited as showing traffic calculation devices.
